

1. First run this command: `php artisan make:migration create_tablename_table`. Then file will be created in the `laravelpro\database\Migrations\2025_07_22_104457_create_tablename_table`.

- Example:

C:

`\xampp\htdocs\rphp\laravelpro\database\Migrations\2025_07_22_104457_create_product_table`:

```
<?php
```

```
use Illuminate\Database\Migrations\Migration;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Support\Facades\Schema;
```

```
return new class extends Migration
```

```
{
```

```
    /**
```

```
     * Run the migrations.
```

```
     */
```

```
    // this class is a blueprint of the table.
```

```
    public function up(): void
```

```
    {
```

```
        Schema::connection('mysql2')->create('product', function (Blueprint $table) {
            //we will add columns in the table
```

```
            $table->id();
```

```
            $table->string('name', 100);
```

```
            $table->float('price');
```

```
            $table->string('description');
```

```
            $table->timestamps();
```

```
        });
```

```
    }
```

```
    /**
```

```
     * Reverse the migrations.
```

```
     */
```

```
    public function down(): void
```

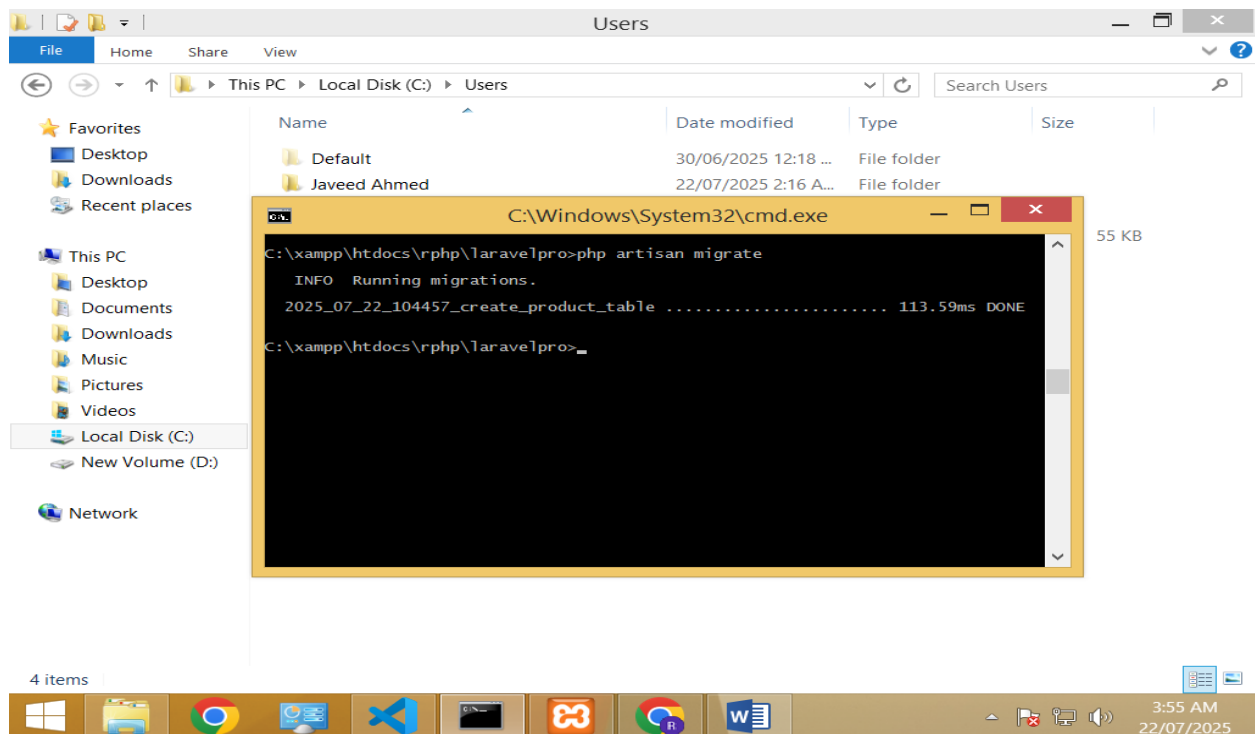

```
    {
```

```
        Schema::dropIfExists('product');
```

```
    }
```

```
};
```

2. After creating the migration file, run this command to execute the migration : `php artisan migrate`.  
So table will be create in the xampp.
